I. Section 5

msg.conf

Name

`msg.conf` — *SCOoffice* Mail Server configuration file

Synopsis

`/etc/opt/lsb-sco.com/msg/msg.conf`

Description

The `msg.conf` is the configuration file for the *SCOoffice* Mail Server. It is created by the post-install script, and contains information about the *SCOoffice* Mail Server and the administrative user. Most values are fixed, and the configurable values should only be modified using *SCOoffice* Mail Server utilities.

Warning

Do not edit the `msg.conf` file manually. Doing so might disable your *SCOoffice* Mail Server configuration.

The following keywords are listed (asterisks * indicate values that can be modified):

`LDAPHOST` *

The location of the LDAP host; the default is `localhost`. This location can be changed using the `msgldaphost(8)` utility.

`LDAPSUFFIX` *

Information about the LDAP host; the default is `ou=Volution Messaging Server,o=domain,c=locale`. This location can be changed using the `msgldaphost(8)` utility.

`ROOTDN`

The root LDAP Distinguished Name; the default is `uid=ldaproot,o=domain,c=locale`

ROOTPW

The root LDAP Distinguished Name password; the default is `%ROOTDNPW%`

ADMIN

The *SCOoffice* Mail Server administrator account name; the default is `admin`

ADMINDN

The *SCOoffice* Mail Server administrator Distinguished Name; the default is `uid=admin,ou=MSG Users,ou=hostname,ou=Volution Messaging Server,o=domain,c=locale`

DN

The fully qualified LDAP name of the anonymous user; the default is `uid=msguser,ou=Volution Messaging Server,o=domain,c=locale`

USER

The *SCOoffice* Mail Server anonymous browse user account name; the default is `msguser`. The anonymous browse user is used by the **Server Manager**, postfix, and cyrus for certain non-privileged operations. This eliminates necessity of doing everything in privileged mode; that is logged in as the admin user.

PW

The password to be used with the anonymous user.

ROOT

The top-level filesystem of the *SCOoffice* Mail Server installation; the default is `/opt/lsb-sco.com/msg`

BIN

The location of the *SCOoffice* Mail Server *bin* directory; the default is `/opt/lsb-sco.com/msg/bin`

TMP

The location of the *SCOoffice* Mail Server *tmp* directory; the default is `/var/opt/lsb-sco.com/msg/tmp`

VAROPT

The location of the *SCOoffice* Mail Server *var/opt* directory; the default is `/var/opt/lsb-sco.com/msg`

DOCR00T

The location of the *SCOoffice* Mail Server guide documentation; the default is
`/usr/share/doc/packages`

vscan.conf

Name

`vscan.conf` — *SCOoffice* Mail Server anti-virus configuration file

Synopsis

`/etc/opt/lsb-sco.com/msg/vscan.conf`

Description

The `vscan.conf` configuration file specifies virus scanning software to be called by Postfix on a *SCOoffice* Mail Server server. It is read by the **msgvscan** utility, which is in turn invoked by the content filter in the Postfix `master.cf` file.

The following keywords are listed:

VIRCMD

The full path of the command to run on mail files.

VIRARGS

Arguments to pass to the virus checking command.

JAIL

Directory to which quarantine messages will be sent; it must be writable by the **vscan** user.
