# *Chapter 1*

## **Overview**

This document provides instructions for adding a Compaq tape drive to a Compaq StorageWorks ESL9198 Series TapeLibrary. Note that the DLT drives used in this library are Low Voltage Differential (LVD). The tape drive upgrade procedure consists of the following steps:

- Installing a tape drive assembly
- Changing the ESL9198 Series tape library configuration

## Tape Drive Numbering

The library contains up to 10 tape drives and 198 tape cartridges at the following locations (see Figure 1-1 and Figure 1-2):

- 100 or 106 storage bins on the back wall, depending on whether the configuration calls for 8 tape drives or 10 tape drives
- Up to 92 storage bins on the inside of the front door

**NOTE:** An additional installation kit is required to install drives into bays 8 and 9. Contact your Compaq sales representative for more information.

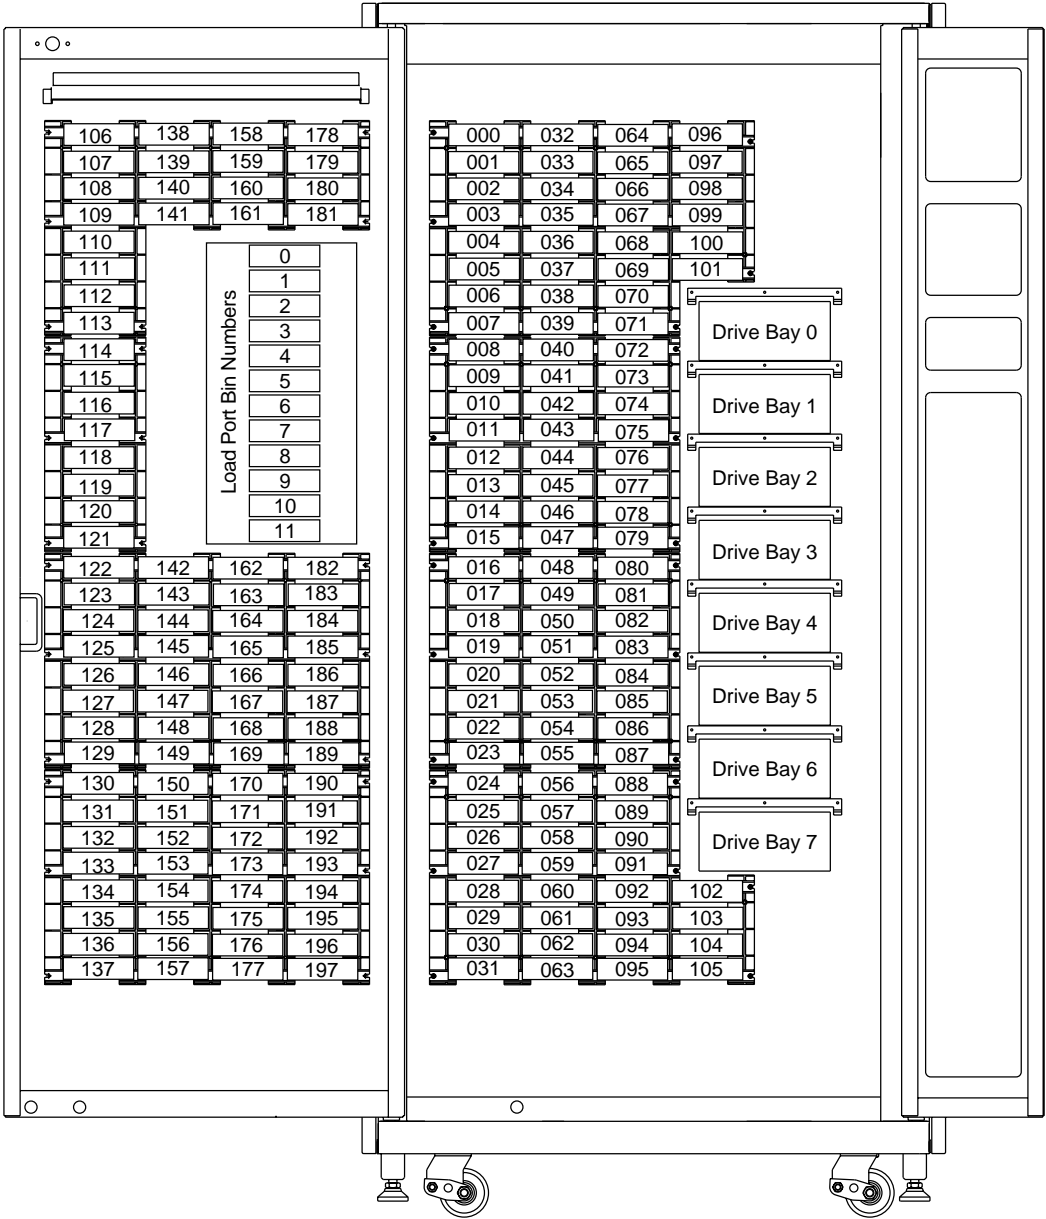

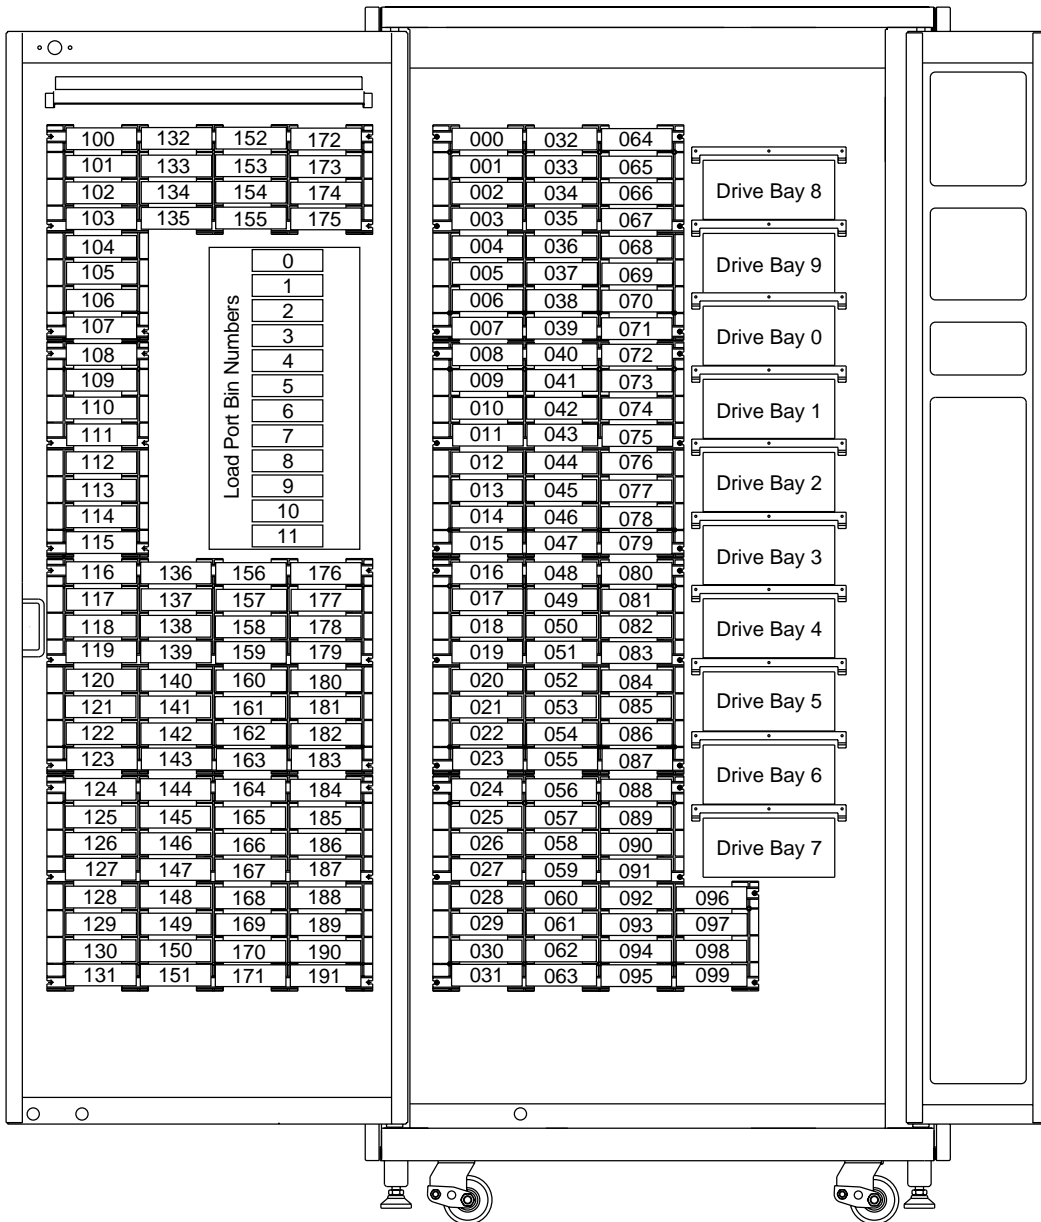

Figure 1-1. Tape drive numbering (8 tape drives)

SHR-1813

Figure 1-2. Tape drive numbering (10 tape drives)

## Required Tools

The following tools are required:

- Flat-blade screwdriver
- Hex key (5/32-inch) to open door

## Accessories

The following accessories are required for non-default SCSI bus configuration:

- Terminator (1)
- SCSI jumper cable (1)

# *Chapter 2*

## **Installing the Tape Drive**

This chapter explains how to install a Compaq tape drive in a drive bay. You need the Compaq ESL9198 Series Tape Library tape drive upgrade kit to complete the installation. Contact your Compaq sales representative for more information.

**NOTE:** The library is in the powered-on state during installation, however, the library robotics is unavailable for host-initiated operations during portions of this upgrade procedure.

Tape drives must be installed in sequential order from the lowest number to the highest (no gaps are allowed).

## Tape Drive Installation

To install a tape drive: (see Figure 2-1)

1. Open the library front door.
2. Insert the tape drive ❸ into the drive bay ❹.
3. Secure the tape drive in the drive bay by tightening the two captive screws ❶. These quick-release screws are located at the lower left and lower right corners of the tape drive.
4. Lower the hot-plug sensor lever ❷.

**NOTE:** The drive position is automatically calibrated once the lever is lowered and the drive has been configured. During this time, the library robotics is unavailable to perform normal operation. If a library time-out or error message is returned as a result of issuing a robotic command from the library, re-issue the command after the tape drive Calibration completes. See Chapter 3 “[Library Configuration](#)” for more information.

The tape drive remains in the powered-off state until Configure completes.

The library comes pre-cabled from the factory for a two-drive-per-SCSI-bus configuration.

# SCSI Cabling Configuration

Figure 2-2 shows a typical SCSI cable configuration for 10 tape drives.

**NOTE:** All ESL9198 Series Tape Libraries are equipped with internal SCSI cables and terminators in place for a two-drive-per-SCSI bus configuration. Additional SCSI jumper cables and terminators are supplied in the library Accessory Kit to enable up to four drives per SCSI bus.

| 9       | 2               |

5. Set the SCSI ID for the new tape drive:
  - a. Press the **Select** button until the Device box is highlighted.
  - b. Using the **Left/Right** arrow buttons, select the new tape drive.
  - c. Press the **Select** button to highlight the SCSI ID field.
  - d. Using the **Left/Right** arrow buttons, select the SCSI ID for the new tape drive.
  - e. Press the **Change** button to accept the new setting.

**NOTE:** The new SCSI ID setting will not take effect until you cycle power on the library.

6. Cycle the library power.
7. Press the **Standby** button to place the library in the on-line state.

The tape drive upgrade is now complete.
